

RUBBER GRINDING

The Gold Series® cartridge dust and fume collector combines enhanced performance with ease of service while cleaning the work environment of irritating dust and fumes.

GS12SQ With Platform on Rubber Grinding

Rubber grinding applications pose multiple challenges for industrial dust collectors. Oils in the rubber are typically the biggest problem. In horizontal cartridge collectors, the filters get saturated and the pleats fail. Heat is also an issue as hot pieces of materials can lay into the horizontal cartridges and burn the filter media. Rubber grinding dust has an explosive nature, and there are also hazards having to do with the hydrocarbons being released.

Application Focus

RUBBER GRINDING

SAFE AIR FOR A SAFE WORK ENVIRONMENT

Rubber Automotive Belt and Tire Grinding Installation

The Gold Series® offers the best solution for dust and fume collection in rubber grinding applications. With its vertical cartridge design, oil is not prone to soak the media. Vertical, wide pleats allow easier discharge of both fine rubber dust and large rubber particles. The Gold Series® offers an optional spark trap inlet design and explosion vents. HemiPleat® High Efficiency (HE) filters capture the smoke associated with the rubber grinding process.

Key benefits:

- High filtration efficiency
- Excellent energy performance
- Long element life

Gold Cone™ Cartridge

Camfil Farr HemiPleat® cartridges have an expanded capacity due to the patented inner Gold Cone™. This inner cone increases media area and provides uniform dispersion of back-pulsed air. It also opens up more useable space for air flow in the filter.

Rubber Grinding Application Focus Users

- Dayco
- B&D Rollers for D. Corporation
- Surbillite Inc.
- Granutech Saturn Systems Corporation
- Tire Terminators
